

“ Watching trevallies as they attacked huge clouds of baitfish was simply mesmerizing. The schools of sardines would literally burst apart in waves of motion as the packs of hunting predators charged through them. To add to the spectacle, a steady rain of tiny, silver scales would drift down from the sardines after each successful attack, all that remained of the unlucky few. ”

◁ Bigeye and black trevally (*Caranx sexfasciatus* and *Caranx lugubris*) hunt in large packs, relying on speed and their ability to separate small groups of prey fish from the main school. Fernando de Noronha, Brazil.
