

“ You can feel Iguacu Falls rumbling in your feet before you see it. Next you hear its thunder and feel the mist on your face. Finally you step to the edge of a gaping chasm and the ground drops away, revealing the most spectacular waterfall in South America. This is where Brazil’s mighty Iguacu River, having gathered strength for more than 1,000 km, plunges over the edge of a gigantic, shattered slab of basalt rock – the remains of a prehistoric lava flow. Every second, 5,000 tons of water hurtles down into a mist-filled abyss, producing clouds of spray and rainbows everywhere. It’s easy to see why some people call it ‘Niagara on Viagra’.
